UI/UX External Viva

Practical-wise Question & Answer Booklet | Course Code 417526

Short, simple answers based on all six experiments in your lab manual.

How to prepare: Practise saying each answer in one or two sentences. For design questions, explain what the screen contains and why that feature helps the user.

Practical 1 – User Persona

Q1. What is a user persona?

Answer: A user persona is a fictional, generalized representation of a real user based on research and user data.

Q2. What is the purpose of a persona?

Answer: It helps designers understand target users and design according to their needs.

Q3. What are the main components?

Answer: Name, demographics, behaviours, goals, motivations, frustrations and technology use.

Q4. Why are user goals important?

Answer: They help designers create features that allow users to achieve what they want.

Q5. What are user frustrations?

Answer: They are problems or difficulties users face while using a product.

Q6. What is user research?

Answer: It is the process of collecting information about users through surveys, interviews and observation.

Q7. Why include technology use?

Answer: It shows which devices and platforms users are comfortable using.

Q8. What is a user journey?

Answer: It describes the steps and experiences a user follows to achieve a goal.

Q9. How do personas improve usability?

Answer: They help the team focus on real user needs instead of assumptions.

Q10. Why create at least two personas?

Answer: To represent different user types and their different needs.

Practical 2 – E-learning Wireframe

Q1. What is a wireframe?

Answer: A wireframe is a low-fidelity blueprint showing the layout, structure and functionality of a screen.

Q2. What is the aim of this practical?

Answer: To design an online learning platform with courses, video lectures, quizzes and progress tracking.

Q3. What is low-fidelity design?

Answer: A simple design that focuses on structure rather than detailed colours, images or typography.

Q4. Which pages are required?

Answer: Homepage, course page and user dashboard.

Q5. What should the homepage contain?

Answer: A search bar, featured courses and course categories.

Q6. What should the course page contain?

Answer: Course outline, video player, quiz access and progress information.

Q7. What should the dashboard show?

Answer: Enrolled courses, completion percentage and milestones.

Q8. Why include progress tracking?

Answer: It helps learners understand how much of a course they have completed.

Q9. Why include quizzes?

Answer: Quizzes help learners test their understanding.

Q10. Name some wireframing tools.

Answer: Figma, Adobe XD, Sketch and Balsamiq.

Q11. Why create a wireframe before development?

Answer: It helps identify layout and navigation problems early.

Practical 3 – Social Fitness App

Q1. What is the main function of a social fitness app?

Answer: It allows users to track workouts, set goals, connect with friends and share progress.

Q2. What is workout logging?

Answer: Recording workout details such as activity, distance, duration and calories burned.

Q3. What screens are included?

Answer: Login/signup, dashboard, workout logging and goal-setting screens.

Q4. Why include social features?

Answer: They encourage motivation, accountability and interaction with friends.

Q5. What is a social feed?

Answer: A page showing activity updates from friends, where users can like or comment.

Q6. What is goal setting?

Answer: Allowing users to define targets such as weight loss or workout frequency.

Q7. How can progress be displayed?

Answer: Using graphs, milestones, badges and progress summaries.

Q8. Why are notifications useful?

Answer: They remind users to log workouts and work towards their goals.

Q9. How does a wireframe help?

Answer: It organizes the app's screens and features before detailed design.

Q10. How is a prototype different from a wireframe?

Answer: A wireframe shows structure; a prototype simulates interactions and navigation.

Practical 4 – Recipe Finder App

Q1. What is the aim of this practical?

Answer: To design an app that helps users find recipes using ingredients, categories and dietary preferences.

Q2. What should the search bar support?

Answer: Searching by ingredient names or recipe names, with suggestions where possible.

Q3. Which filters are included?

Answer: Cuisine type, meal type, dietary restrictions and cooking time.

Q4. What are dietary restrictions?

Answer: Food preferences or limitations such as vegan, gluten-free or low-carb.

Q5. What should the recipe details page contain?

Answer: Ingredients, cooking instructions, nutrition, preparation time and images or videos.

Q6. How can users save recipes?

Answer: Using a heart icon or Save to Favorites button.

Q7. Why use an ingredients checklist?

Answer: It helps users check which ingredients they already have.

Q8. Why include serving-size adjustment?

Answer: It allows users to change ingredient quantities based on the number of servings.

Q9. What is responsive design?

Answer: A design that adjusts to different screen sizes and devices.

Q10. Why is consistency important?

Answer: It makes buttons, navigation and interactions predictable across screens.

Q11. Which pages are included?

Answer: Homepage, filters/category page, recipe details page and favorites page.

Practical 5 – Fitness App Redesign

Q1. What is the aim of this practical?

Answer: To improve an existing fitness app by making it simpler, clearer and more motivating.

Q2. Which main areas are redesigned?

Answer: Home screen, workout logging, goal setting and progress tracking.

Q3. What is one-tap workout logging?

Answer: A quick way to record a common workout with minimal steps.

Q4. What is a fitness goal?

Answer: A target such as daily steps, weight loss or workout frequency.

Q5. How can progress be visualized?

Answer: Through charts, graphs, progress bars, completion rings, badges and streaks.

Q6. What is gamification?

Answer: Using game-like elements such as badges, streaks and challenges to motivate users.

Q7. What is a streak?

Answer: The number of consecutive days or weeks a user maintains an activity.

Q8. What is a floating action button?

Answer: A prominent button that gives quick access to an important action, such as logging a workout.

Q9. Why simplify navigation?

Answer: It helps users find important features with fewer steps.

Q10. How does user feedback improve the app?

Answer: It reveals problems and preferences that designers can use to improve the interface.

Q11. What accessibility features can be added?

Answer: Large text, voice support and colour-blind-friendly design.

Practical 6 – High-fidelity Prototype and Usability Testing

Q1. What is a high-fidelity prototype?

Answer: A detailed interactive model that closely resembles the final product.

Q2. What is usability testing?

Answer: Testing a design with users to check how easily they can complete tasks.

Q3. What is the main purpose of usability testing?

Answer: To identify usability problems and improve the user experience.

Q4. What is task completion rate?

Answer: The percentage of assigned tasks users complete successfully.

Q5. What is time on task?

Answer: The time a user takes to complete a particular task.

Q6. How is user satisfaction measured?

Answer: Through feedback, surveys or interviews after users complete tasks.

Q7. What is observation in usability testing?

Answer: Watching users interact with the prototype and noting difficulties.

Q8. What is think-aloud protocol?

Answer: Asking users to speak their thoughts while using the product.

Q9. What is a testing plan?

Answer: A plan that defines test objectives, participants, tasks and feedback methods.

Q10. How do you select participants?

Answer: Choose people who represent the target users and their characteristics.

Q11. What is iterative design?

Answer: Repeatedly improving a design based on feedback and testing.

Q12. Why retest after making changes?

Answer: To check whether the changes improved usability and did not introduce new problems.

Q13. What is bias minimization?

Answer: Avoiding leading questions or guiding users towards a particular answer.

Q14. Name usability testing tools from the manual.

Answer: UsabilityHub, Lookback and Maze.

Common UI/UX Viva Questions

Q1. What is UI?

Answer: UI means User Interface. It includes the visual elements and controls users interact with.

Q2. What is UX?

Answer: UX means User Experience. It is the overall experience a user has with a product.

Q3. Difference between UI and UX?

Answer: UI focuses on the interface's appearance and controls; UX focuses on the overall user experience.

Q4. What is usability?

Answer: The ease and effectiveness with which users can use a product.

Q5. What is navigation?

Answer: The way users move between pages or sections of a product.

Q6. What is accessibility?

Answer: Designing products so people with different abilities can use them.

Q7. What is visual hierarchy?

Answer: Arranging elements to show their importance and guide the user's attention.

Q8. What is consistency in design?

Answer: Using similar styles and interaction patterns throughout a product.

Q9. What is a responsive interface?

Answer: An interface that adapts to different screen sizes.

Q10. What is Figma?

Answer: A collaborative tool used to design interfaces, create wireframes and build interactive prototypes.

Q11. What is a mockup?

Answer: A static visual representation of a design showing its appearance.

Q12. What is the difference between a mockup and prototype?

Answer: A mockup shows how a design looks; a prototype demonstrates how it may work.

Q13. What is user-centred design?

Answer: A design approach that considers users' needs throughout the design process.

Q14. What is a pain point?

Answer: A difficulty or problem that makes a user's task harder.

Q15. What is feedback in design?

Answer: Information from users about their experience, used to improve the design.

Last-Minute Revision Sheet

Practical	Remember this
1 – User Persona	At least two personas; demographics, goals, motivations, frustrations, technology use and user journey.
2 – E-learning Wireframe	Homepage, course page and dashboard; search, courses, videos, quizzes and progress.
3 – Social Fitness App	Login, dashboard, workout logging, goal setting, social feed and progress sharing.
4 – Recipe Finder	Search, cuisine/meal/diet/time filters, recipe details, ingredients, instructions and favorites.
5 – Fitness App Redesign	Workout logging, goals, progress charts, badges, streaks and simple navigation.
6 – Usability Testing	High-fidelity prototype, test plan, participants, tasks, feedback, metrics, iteration and retesting.

Best answer structure: Define the concept → explain its purpose → give one example from your practical. Keep answers clear and brief.
